

Pullex® Crocodile

Mounting example of fixing plate C301.

The fixing plate C301 is allround and meant to be used on different kinds of tool holders for blade ~26/21,4.

Oval grooves in the fixing plate makes it possible to fit different holders. Two holes are drilled and threaded for screw M5x8 in upper and lower section according to the picture below.

For left hand tool the measure is taken from the opposite side.

The above is a general recommendation of mounting the fixing plate on a Sandvik tool holder in order to reach the whole gripping capacity of the frame. But, depending on which types/brands of tool holders are used and if a certain overhang of the blade must be used, the user should check the position of the fixing plate/frame before drilling the holes.

For this tool holder, please also look at the fixing plate C301A.
